

About the 2022 California Patient Safety Honor Roll

Background

The Patient Safety Honor Roll uses objective, publicly available patient safety measures to evaluate hospitals across a variety of domains including hospital acquired infections, adverse patient safety events, sepsis management, patient experience, and Leapfrog Hospital Safety Grade. Developing the criteria to identify high performing hospitals was an 18-month, multi-stakeholder process of rigorously evaluating existing national patient safety scoring systems and adapting them for the available measures and unique features of California hospital.

While the Patient Safety Honor Roll is an excellent indicator of patient safety, CHC appreciates measurement of patient safety is complex and there is no single validated method for measuring the overall safety of care provided in a given health care setting.¹ Therefore, CHC recognizes hospitals excluded from this year's Patient Safety Honor Roll are still capable of providing high quality care to patients. Bright spots in performance can occur in any area of a hospital and bright spots can exist even within hospitals with comparatively lower quality (example bright spots may include orthopedic surgery, maternity services, and cancer care).

- The 2022 Patient Safety Honor Roll recognizes 86 adult, acute care hospitals with high safety profiles in comparison to other hospitals.
- This Honor Roll offers Californians a rigorously evaluated list of hospitals that have consistently demonstrated a strong culture of safety across multiple departments and offers hospitals yet another valuable tool to evaluate and celebrate their own performance in comparison to others.
- The 86 hospitals represent 27% of the 323 adult, acute care hospitals considered for the Honor Roll.
- The Patient Safety Honor Roll uses two approaches 1) an algorithmic method based on individual hospital performance across 12 patient safety measures and 2) Leapfrog Hospital Safety Grades.
- Honor Roll hospitals had to meet a rigorous threshold of performance by having at least 2/3 of measure results above the 50th percentile and no measure result below the 10th percentile and/or Leapfrog Hospital Safety Grade A for the past three reporting periods.
- For the algorithmic method, measures include Hospital Acquired Infections, the Agency for Healthcare Research and Quality PSI 90 Composite, Sepsis Management, and Patient Experience.
- The use of both an algorithmic method and the Leapfrog scores provides two complementary signals of high patient safety performance derived from publicly reported information. The methodology primer is [here](#).

About the 2022 California Patient Safety Honor Roll

- CHC did not produce a Patient Safety Honor Roll in 2021 due to the changes in data reporting because of COVID-19.
